Free Mac OS X file management solution

There was a good reason why we decided to create dual-pane file manager: for so many years Mac OS lacked a fast dual-pane file manager, where you could work without switching back and forth among the windows - all within one. Don't get us wrong - we love Finder, but even in 10.12 it still lacks a lot of options.

Some would say that dual-pane file manager is well in the past, but when you are working with big loads of data, there is nothing more convenient.

So our aim was to make Commander One appealing to those who work on their Macs a lot and value every minute of their time. Commander One should save thousands of hours spent at the computer.

100% developed in Swift

Despite dual-pane file manager being kind of old-school, we chose the most modern tool to develop Commander One. We also started a blog where we shared the development steps and glitches we found in Swift during the process and how to solve those. We keep on working on Commander One and have more interesting stuff to share. Since version 1.2 Commander One migrated to Swift 2.0 to become even more stable and fast.

Smart File Management

Commander One is and is going to stay free file manager that offers the following functionality right now:

- Two panels with three view modes and unlimited tabs
- Multiple selection
- Queue file operations even those in progress
- Rename files during copy and move operations
- Set up custom hotkey for any action
- Work with local and network drives
- Customizable fonts & colors
- Spotlight search
- Show hidden files
- Advanced search with regular expressions
- ZIP archives support with compressing, extracting and full access
- Detect over the network and conveniently list computers that use NetBIOS protocol
- Root Access
- Preview multiple types of files including binary and hex
- Work with .ipa, .apk, .jar, .ear, .war archives as with regular folders

All the core features are under constant improvement and development and will always stay absolutely free, because Commander One also has…

PRO Pack

It is a paid pack of the most demanded profound features.

Commander One features Connection Manager - the easiest way to access and manage all your clouds and network servers in one place.

With Connection Manager you can:

- Connect to remote servers via FTP, FTPS and SFTP;
- Work with WebDAV protocol servers directly from Commander One;
- Link your entire storage on Amazon S3 with Commander One or only specific buckets;
- Mount many Google Drive accounts at a time and work with all your online files as if they were on your computer;
- Mount or integrate multiple Dropbox accounts. Integration allows you to share Dropbox links from Commander One interface;
- Work with your OneDrive files as with the local ones without actually saving them to your computer, OneDrive Business support is also available.

Get even more benefits with PRO Pack:

- RAR support with extracting, full access and search
- TarGz with compressing, extracting, search, and full access
- 7zip with compressing, extracting, search, and full access
- Mounting of iOS devices
- Mounting of Android devices
- Mounting of MTP devices
- Process viewer
- Terminal Emulator
- Colorful individual themes

These features are going to be under constant improvement too, and we will be adding new ones to make PRO Pack even more versatile and professional and interesting to work with.
